6.1.3. Referred (re-sit) examination

No se ha definido la evaluación extraordinaria.

6.2. Assessment criteria

Students will be qualified through continuous evaluation by default. According to the Normativa de Evaluación del Aprendizaje de la Universidad Politécnica de Madrid, students willing to renounce to continuous evaluation must direct a request form through the link that will be enabled to this effect in Moodle before October 15th 20120.

The course will be approved when a grade greater than or equal to 5 points is obtained out of a total of 10. The final grade in continuous evaluation will be obtained by adding the grades corresponding to the different evaluation activities, with the following weights:

- Examination: 40%
- Final project development and presentation: 50%
- Attendance and participation: 10%

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through final assessment will be carried out considering all the evaluation techniques used in continuous evaluation (EX, ET, TG, etc.), and will be celebrated in the exam period approved by Junta de Escuela for the current academic semester and year. Evaluation activities that assess learning outcomes that cannot be evaluated through a single exam can be carried out along the semester.

Extraordinary examination and students that have renounce the continuous evaluation will be assessed through a final exam.

8. Other information

8.1. Other information about the subject

This course aims to contribute to educating students to become empowered as active global citizens and to realize themselves with an innovative program aligned with several of the SDGs, transforming them into innovative engineers and leaders for sustainable development that are necessary to find new ways to tackle the problems of today and tomorrow. In particular, with SDG 3, which promotes guaranteeing a healthy life and promoting well-being for all.

With this subject the skills related to creativity will be expanded, the design of sustainable solutions considering technical, functional and socioeconomic aspects; promoting teamwork, planning, organization and communication; identifying, formulating and solving engineering problems, evaluating their impact on society and taking into account the ethical and privacy considerations that must be considered. They will contribute to sub-objectives 4.3: Ensure that students access quality technical, professional and superior training; 4.4: Significantly increase the number of people with the professional and technical skills necessary to access employment and entrepreneurship; and 4.7: Ensure that all students acquire the theoretical and practical knowledge necessary to promote sustainable development.

In this way, new learning opportunities are offered to students and equipped with the skills they need to find lasting solutions to the problems that affect them most, in this case, health. The digital transformation of health will lead to improving the efficiency and sustainability of current models of healthcare systems, as well as a significant advance in the health and well-being of patients and citizens in general.
